

Security Awareness

Education is Your First Line of Defense

Over 90% of breaches & ransomware start with phishing.

Despite all the funds you may have spent on state-of-the-art security software, the bad guys are just one gullible user click away from staging an all-out invasion. To make matters worse, that user might well be you! Recent surveys show that executives can be some of the biggest culprits when it comes to clicking on phishing links and opening malicious email attachments. Yet by far the most effective strategy in combatting these attacks is also one of the most poorly implemented – security awareness training.

We take an holistic approach of education and wrap training around today's latest threats and security best practices to keep your user base alert. This includes areas like phishing awareness and proactive testing, understanding what sensitive data is, how to react towards your organizations policy/procedures, regulation training, and information security best practices. We firmly believe that continual user training is the first option when it comes to building a security practice.

CCSI's Security Awareness Training has provided a positive and measurable impact in the organizations that have implemented it. This can be measured in both the confidence level that security-focused IT professionals have in their employees' ability not to fall prey to attacks, as well as in the perception about improvements in the user's security decisions with their systems and data. Our tests help determine education gaps and policy changes within your organization.

We offer the following areas of training to educate and improve your user's security understanding of today's threats and to assist with complying to security regulations that require it:

Educate
Your Users

Stop
Ransomware
from Entering

Security Awareness Training

- Training Videos, Games, and Additional Media
- Proactive Phishing Tests to Validate Education
- Social Engineering Techniques
(USB drops, Phone Pretexting, and Social Networking)

- OSINT Reconnaissance to Review Users Posture
- Incident Table Tops to Educate on Process and Procedure
- Policy and Procedure Assistance Regarding Security Awareness for Compliance

Why CCSI?

CCSI provides the highest quality of service in the industry for the full spectrum of technologies—from containers to PCs, network infrastructures, managed services, IP telephony, cybersecurity, cloud services, SDWAN, to storage solutions. We provide architecture with innovation. Partner with us and discover what sets us apart from the rest.

We listen, we care, and we support. Let's Grow Together.
