Discover where your systems are vulnerable to a breach.

Your environment is filled with systems being accessed by employees to perform their jobs. These systems are an integral part of your organization success. These very same systems, if not properly cared for, can also be accessed by an adversary for malicious purposes and be used to bring down your business and reputation. Discovering where your systems and applications are vulnerable is an important step in protecting your business from attackers. By determining where your exploitable helps guide an organization on prioritizing efforts and reducing the risk of being breached.

All assets in your network need proactive vulnerability management. This approach of discovering critical assets, identifying vulnerabilities and prioritizing them for remediation is part of the vulnerability management life-cycle. In today's network, organizations need to apply this approach to their network, systems and web applications across the board. This also means this methodology needs to take place across today's ever growing hybrid network. By applying vulnerability management to systems internal, externally, and in the cloud will help drive down overall risk to your environment.

Today many regulations are enforcing business vulnerability management within their cybersecurity programs. We can assist with determining these assets and tailoring custom scans based off the regulation framework your organization adheres too. With our experience in the vulnerability management space we're able to apply these scans towards a framework directed towards a particular asset type to discover vulnerabilities in your environment. This solution is fully managed and comes complete with our 24x7 SOC to assist with customizing our offering to your particular business needs. This includes the fine tuning, monitoring, implementation and prioritization of discovered vulnerabilities. We look to create a measurable program that assists with defending your environment in a continuous manner.

Discover Vulnerabilities

24x7x365 SOC Monitoring

Managed Vulnerability Scanning and Solutions

- ✔ Streamline Compliance
- ⚠ Identify Weaknesses
- 🔄 Automated Scanning
- 📶 Scalable Architecture

- ⊕ Discover Internal and External Exposure
- 👥 Continuous Vulnerability Management
- 🕐 24x7x365 SOC Monitoring and Advisory
- 📊 Measurable Security Metrics

- 👁 Visibility into Applications and Networks
- 123 Prioritized Risk Based Reporting

Why CCSI?

CCSI provides the highest quality of service in the industry for the full spectrum of technologies–from containers to PCs, network infrastructures, managed services, IP telephony, cybersecurity, cloud services, SD-WAN, to storage solutions. We provide architecture with innovation. Partner with us and discover what sets us apart from the rest.
